

Hello and thank you for this opportunity.

I realize this input was due by Jan. 29, but in the hopes it is still relevant, here is one suggestion for Water Administration Statutes - Integrate groundwater GWIC data with the DNRC Water Right Query System data.

If one number, for example, could identify both the water right and the groundwater data available that would make it much more efficient to research, discuss, and come up with solutions to the myriad of questions that come up regarding groundwater rights. It would also be great to provide a link to the GWIC related page and vice versa to the DNRC Query System data from both sites.

Sincerely,

Ada C. Montague, Associate
